VITAL STATISTICS

Year Founded: 1991
Number of Employees: 370
Number of Facilities: 3

WHO WE ARE

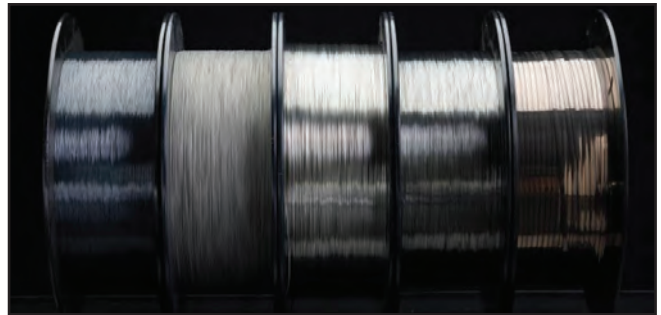

NDC is the world's most complete provider of nitinol products and services. We produce nitinol material. We produce nitinol components from prototype phase to full production. We offer a full array of services that include design, component testing, analysis, simulation, and regulatory support. Teaming with us can accelerate your nitinol device development timeline.

Now a completely independent and privately held company, NDC is the medical device industry's partner of choice for nitinol innovation.

MAJOR MARKETS

NDC's primary focus is the medical device industry with particular attention on the vascular, neuro-vascular and orthopedic device markets.

SERVICES OFFERED

NDC has the broadest understanding of the use of nitinol materials for medical device applications of any supplier.

We've developed market proven processes to make nitinol components such as stents, filters, frames and orthopedic components. NDC pioneered precision laser cutting of nitinol tubing for medical devices. We produce a wide array of components that involve many operations such as: wire, tube, strip and sheet cutting and forming, laser machining, welding, EDM, surface finishing, and electro-polishing. We have prototyping capability and full-scale production facilities. We also offer a wide range of testing services; such as mechanical properties, corrosion, FEA, failure analysis, fatigue analysis; and device design services.

We are a high volume fabricator of semi-finished nitinol materials: wire and tube, strip, bar, and sheet products, that supports our external customers and the components made in house. NDC offers the only continuous superelastic nitinol sheet product available in the world that is ideal for volume stamping and etching processes.

This year NDC will operate from a new manufacturing facility in Costa Rica to better serve our nitinol components customers.
