WHO WE ARE

For more than 20 years, Onyx has been a leader in contract manufacturing of precision implants and instruments for surgical cutting, nailing, fixation and navigation. Onyx addresses the strategic sourcing needs of our orthopaedic customers by establishing long-term, mutually beneficial partnerships and developing integrated supply chain solutions allowing you to compete effectively in today's global marketplace.

MAJOR MARKETS

100% Medical Devices – Orthopaedic and Spinal

SERVICES OFFERED

Core Production Competencies: Turning, Grinding, Milling, Heat Treating, Anodizing, Coatings, Epoxy Ink Painting, Electropolishing and Passivation, Laser Marking, Sterile and Non-Sterile Final Packaging, VMI, Product Development.

Quality: Everything we do starts with a best-in-class quality system and a deep respect for the market and people we serve. Onyx understands the stringent regulatory demands of the medical device industry. We handle these every day – from supplier quality agreements and control plans to risk analyses and process validations – meaning you won't waste any time getting us up to speed.

Ingenuity: Whether helping to bring a new product to market or strategically optimizing your supply chain, Onyx is constantly striving to keep you competitive by providing the highest quality products at the lowest total cost. We tackle the challenges others cannot, bringing a fresh perspective that comes from a profound knowledge of what we do.

Service: It's the people at Onyx that truly make a difference. We instill in employees at all levels our values of commitment, communication and continuous improvement. We stay abreast of your changing needs and strive to be the best partner we can be.

Technology: Onyx is a knowledgeable and experienced supplier that works diligently to stay current with industry trends and lead in best practices for quality, materials, manufacturing, finishing and process controls. We utilize our capacity, technology and expert staff to make your ideas work in real time. Our new 53,000ft² facility is readily expandable up to 75,000 ft² and is custom designed to promote improved efficiency and lean throughput to support the growing needs of the medical device industry.
